

VAiOS C2 / Wi-Fi smart module for air conditioner application

VAiOS™

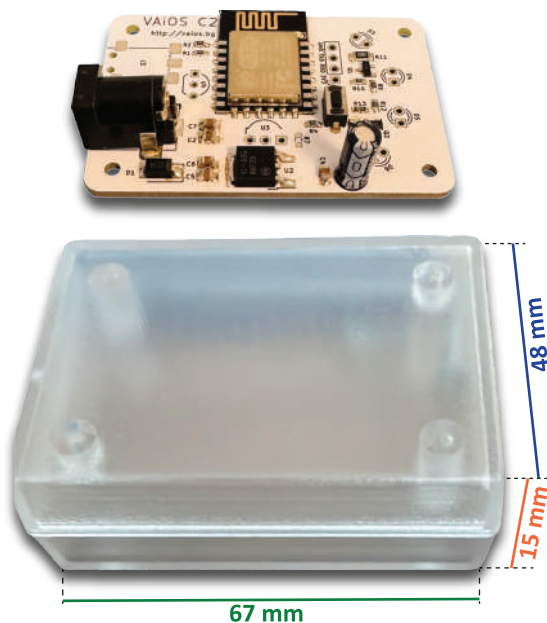

Total control of each air conditioner

VAiOS C2 is an infrared smart module that performs the basic function of controlling the air conditioning in the home or office. Its simple hardware base and various combinations make it possible to cover all the functionalities it has. At first glance, the C2 duplicates the air conditioner's synth, but at the same time communicates with the smart home controller. This allows the air conditioner to be controlled together with the other devices in the smart home.

At the same time, installing C2 modules in all air conditioners of a home or office allow you to control them easily via the VAiOS app, available for all three mobile operating systems.

Dimensions

Features

Designed for:	Thermal control
Connection type:	Wireless
Compatible OS:	Android, iOS
Link:	IR (infrared)
Interface:	Smartphone App & WEB software
Range:	to 5 m
Power supply:	12V
Wireless protocol:	802.11 b/g/n
Sensor type:	Temperature
Number sensors:	3 pcs.
Usage:	Surface installation
Dimensions*:	L: 67 / W: 48 / H: 15

** dimensions are for the module housing*
