

Support & Facilities for buildings

Main problems to be solved

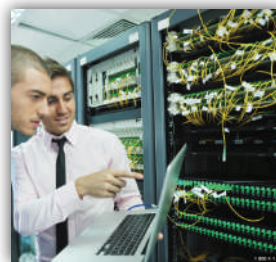

At its inception, Biss Solutions' primary goal was to solve the most common problem of Project Sponsors - regularly running away from responsibility when a problem occurs by passing the problem off as the responsibility of another subcontractor. Hence the slogan of Encore Solutions - All in On Solution. Or to summarise: when the Employer has a problem they should turn to a single company to fix it.

SECURITY SYSTEMS

BUILDING STOCK

COMMUNICATIONS & CONNECTIVITY

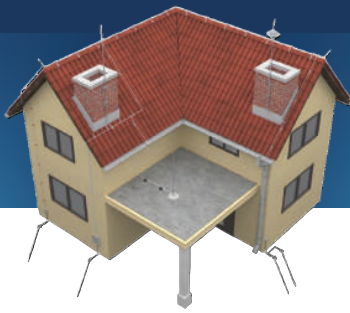

It has been over 15 years since the company was founded. In that time we have made mistakes and achieved successes. Time has taught us that good business is based on partnerships and quality product offerings.

...over 15 years of experience

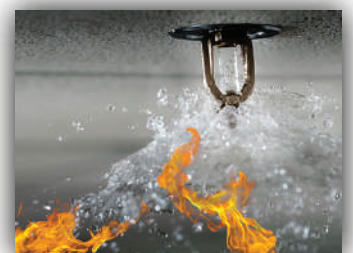

Responsibility towards security

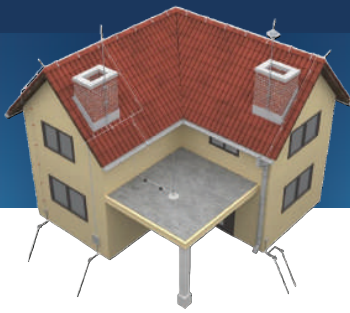

Bis Solutions is passionate about security systems. For all these years it has built up a wide range of contacts with distributors and specialists in all areas of security systems. This secures the construction and maintenance of buildings with various equipment.

Основните системи, които влизат в поддръжката:

- ▶ Access control and working hours
- ▶ Alarm systems
- ▶ CCTV
- ▶ FAS, Fire Alarm Systems
- ▶ Fire Extinguishing
- ▶ Fire extinguishers and fire hydrants
- ▶ Parking and garage systems
- ▶ Voicing and Alert
- ▶ Intercom systems

Responsibility towards the building stock

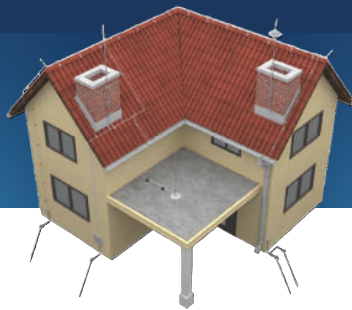

In the practice of Biss Solutions, we have repeatedly engaged in the maintenance of electrical installations, building facades and exterior spaces. Our profiled activity has prompted us to find suitable trusted partnerships in the work directions in which we are not specialists. However, confirming the All in On Solution principle, we at the COMPANY follow up the work of our partners and take responsibility for the work that is done in the respective directions.

The main systems that go into maintenance:

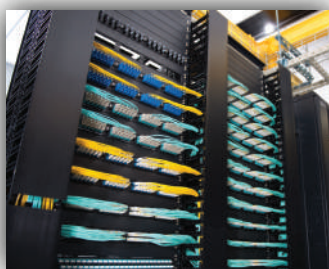

- ▶ Building stock
- ▶ Building & Area cleaning
- ▶ Landscape & Gardening
- ▶ Electrical Installations
- ▶ Air Conditioning
- ▶ Ventilation

Responsibility towards communications

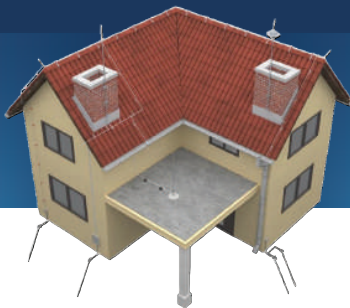

We live in a time where our connectivity to the rest of the world is in our pocket. But to be able to connect, we need a network of connections, cable routes and teleologies to do the 'black work'. In particular, each building has a specific communications network. At Bis Solutions, we service and secure the operation of these systems as well, maintaining all the cable pathways, routers, switches, access points, communication cabinets, etc. - all the equipment and peripherals for proper operation and smooth communication.

The maintenance of these systems mainly includes:

- ▶ Server premises
- ▶ Communication cabinets
- ▶ Communication equipment
- ▶ Communication accessories
- ▶ Cables & Cable routes

Partnership for success

АДВОКАТСКА КАНОРА

Our long experience has confronted us with a number of case studies. Overcoming them has introduced us to partner companies, with whom we have shown our loyalty to each other over time. At present, this helps us to solve problems in Bulgaria and to be able to assist both with legal advice and with communication with the other party.
